

PRE-CLEANING DETERGENT SPRAY

THE INSTRUMENT CLEANING PRE-TREATMENT YOU NEED FOR LESS RISK OF CROSS-CONTAMINATION

HALYARD* Pre-Cleaning Detergent Spray, in the convenient 24-ounce bottle, begins the process of breaking down medical soils on contaminated, reusable medical devices following procedures throughout your facility. Just a quick spray immediately following a procedure thoroughly coats external instrument surfaces and helps maintain a moist environment during transport. Compared to immersing instruments in a bath of detergent, this method poses less risk of spills and contamination on floors, surfaces and healthcare workers.

The spray is the first step in the thorough cleaning of instruments before they are disinfected or sterilized. Proper cleaning can improve reprocessing outcomes and reduce the risk of crosscontamination from instruments. HALYARD* Pre-Cleaning Detergent Spray provides benefits that can help make your facility's cleaning process easier and more complete:

- Convenient: coats surfaces quickly and easily
- Compatible: can be used with a wide range of devices
- Ready-To-Use: no dilution or mixing
- Non-Enzymatic Spray: reduces the risk of respiratory sensitivity
- User-Friendly: pleasant fragrance in an ergonomically designed package
- Process-Friendly: easily integrates into your current practices
- Environment-Friendly: biodegradable and phosphate-free

HALYARD* Pre-Cleaning Detergent Spray is just one of the clinical solutions you can depend on to meet the demands of your fast-paced world.

For more information about HALYARD* Pre-Cleaning Detergent Spray, ask your Halyard Sales Representative, authorized Halyard Distributor Representative or visit our website at www.halyardhealth.com
